PROFILE

Fresh graduate and self-driven web developer. Went from HTML, CSS and JavaScript to shipping a full-stack production app in the same year: Daywell, a faith-centered daily planner built with Next.js, Supabase and Tailwind, with unit and end-to-end tests. Strong eye for design, calm interfaces, and readable code. Looking for a junior developer role or internship where I can keep learning fast.

PROJECTS

Daywell — daily planner 2025 · Live
[daywell-project.vercel.app](#) · Solo project, design to deployment

A planner for managing work, studies, and one's walk with God. Login and signup, tasks that repeat on their own, a focus countdown timer, a calendar with events, a verse of the day, and daily progress.

- Designed the Postgres schema, migrations, triggers and row-level security so each user only sees their own data.
- Built auth with Supabase (email confirmation, session refresh via Next.js proxy) and server actions for login, signup and logout.
- Implemented repeating tasks (daily, weekdays, weekly, custom), a derived "missed" state, and a shadcn/ui design system with a custom palette and loading skeletons.
- Wrote Vitest unit tests (status rules, dates, schemas, verse rotation) and Playwright end-to-end tests; deployed on Vercel.

Personal portfolio 2025 · Live
[kvndvlpr.github.io/MyPortfolio2025](#) · HTML, CSS, JavaScript

- Hand-built with no framework or build step: token-based CSS, scroll-snap glass slider, interactive tech-stack explorer, in-page CV viewer.
- Responsive, keyboard-accessible, respects reduced-motion, deployed on GitHub Pages.

EDUCATION

[Your degree, e.g. BS Information Technology] Class of 2025
